

shape memory polymers for multiple applications in the - *the use of light as stimulus to actuate the smps presents several advantages over the heating stimulus approach for example a soft activation of smp materials can be easily executed for biomedical applications by avoiding an undesirable heating burning at the surrounding tissue during actuation,*

functional porous coordination polymers kitagawa 2004 - *the chemistry of the coordination polymers has in recent years advanced extensively affording various architectures which are constructed from a variety of molecular building blocks with different interactions between them*
